OBJECTIVE

Final-year Computer Science student with hands-on experience building full-stack web applications and deploying AI-integrated systems. Skilled in React, Next.js, and Node.js, combined with practical knowledge of LLM integrations and machine learning fundamentals. Seeking a Software or AI Engineer role to build scalable, intelligent solutions.

TECHNICAL SKILLS

Languages: Python, JavaScript (ES6+), C++.

Frontend: React.js, Next.js, Tailwind CSS, GSAP, Framer Motion.

Backend & APIs: Node.js, Express.js, REST APIs.

Databases: MongoDB, MySQL, Pinecone, Redis.

AI & Machine Learning: RAG Systems, LLM Integration (OpenAI, Groq), Scikit-learn, XGBoost, SHAP.

Data & Visualization: Pandas, NumPy, Matplotlib, Seaborn, Streamlit.

CS Fundamentals: OOPs, DBMS, Computer Networks, System Design.

Tools & DevOps: Git, GitHub, Vercel, Render, Postman, VS Code, CI/CD (GitHub Actions).

EXPERIENCE

Front-End Intern – Hybrid

Jul 2025 – Oct 2025

Wish Geeks Techserve Pvt. Ltd.

- Improved component reusability by 40% by restructuring React codebase with modular architecture.
- Reduced code review iterations by standardizing naming conventions and coding standards across 10+ components.
- Delivered production UI features in a hybrid team environment under senior review, ensuring consistency with the existing architecture.

PROJECTS

Fuel-Fit | *MERN Stack, GSAP, Tailwind CSS* | [Live](#)

- Designed a personalized meal-planning platform that generates diet recommendations across 3 user dimensions (fitness goals, dietary preferences, and activity level) — targeting a gap in one-size-fits-all nutrition apps.
- Implemented user authentication, profile management, and persistent meal-plan storage using Express.js and MongoDB.
- Delivered a fully responsive, animation-driven dashboard with custom GSAP animations for diet card transitions, achieved 90+ Lighthouse performance score.

ImpactSenseAI | *Python, Scikit-learn, XGBoost, Streamlit* | [Live](#)

- Built an earthquake impact prediction system using Random Forest and XGBoost classifiers on geophysical data such as magnitude, depth, latitude/longitude, and soil type.
- Achieved a 75% F1-score on risk zone classification after model training and evaluation.
- Deployed an interactive Streamlit dashboard allowing upload of test data and real-time risk zone visualization.
- Applied SHAP analysis on geospatial features, identifying depth and fault line as key risk predictors.

Jodo.AI | *React, Tailwind CSS, LLM Integration (Groq), Pinecone, Redis* | [Live](#)

- Built a RAG-based knowledge assistant using Hugging Face embeddings and Pinecone vector search for scalable document retrieval.
- Implemented hybrid search by combining BM25 keyword search with vector search, then merged results using Reciprocal Rank Fusion to improve retrieval quality for superior retrieval accuracy.
- Developed a React frontend with real-time streaming responses through SSE and added Redis-based caching to reduce repeated retrieval latency.
- Integrated Groq LLM for answer generation and Tavily web search for context beyond the uploaded documents.
- Integrated Cohere reranker to reorder retrieved candidates by semantic relevance, improving final answer quality.

EDUCATION

St. Andrews Institute of Technology & Management, MDU

Bachelor of Technology, Computer Science & Engineering

Sep. 2022 – Expected Aug. 2026

Govt. Co-ed Sr. Sec School Dwarka Sector 22, Delhi

XII(CBSE)

90% – June 2021
